Experience

Washington State Department of Health

January 2019 - Now

United States, Olympia, WA

Environmental Epidemiologist

- Investigate the health effects of air and water pollution in urban areas, focusing on vulnerable populations.
- Design exposure assessment studies, measuring pollutant levels in residential areas and linking them to health outcomes.
- Provide data-driven recommendations to policymakers on air quality standards and water safety regulations.
- Partner with environmental scientists and community organizations to conduct participatory research and enhance public engagement.
- Author policy briefs and technical reports that informed statewide environmental health initiatives.

Seattle Public Utilities

May 2018 - December 2018

United States, Seattle, WA

Epidemiology Intern

- Analyzed data on lead contamination in drinking water and its associated health impacts, producing actionable insights.
- Supported public health campaigns aimed at reducing lead exposure in schools and residential areas.
- Assisted in developing GIS-based visualizations to map contamination hotspots and prioritize mitigation efforts.

Skilled in public speaking, policy advocacy, and technical report writing
